رباعد
Rabaed

The construction project OS · Saudi Arabia

Three parties. One record. Clear ownership.

Rabaed puts owner, consultant and contractor on one platform: approved correspondence, approvals and inspections, documents at their latest revision, and daily site reports. Every step is dated, with the name of who took it, and you go live within days.

Company profile · Version 4 · 2026

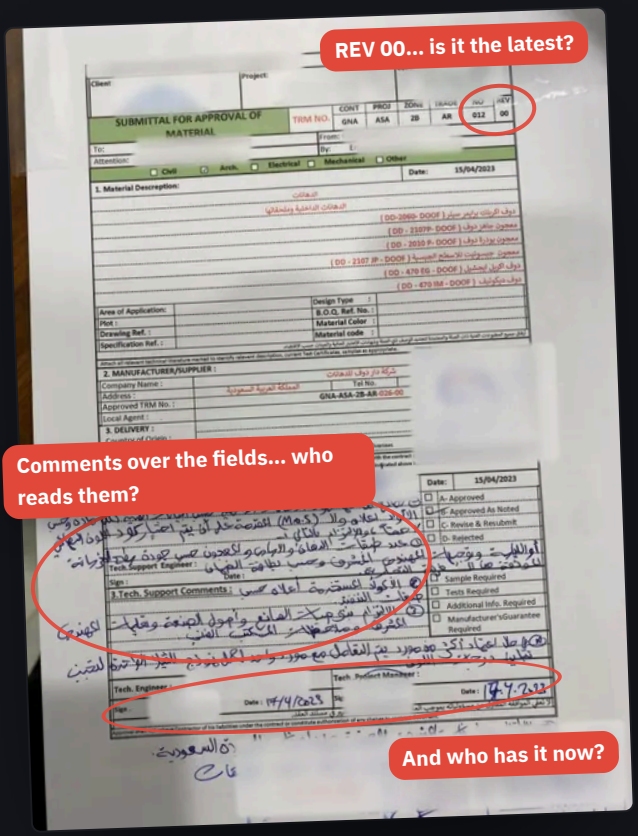

Parties working on Rabaed right now

نواة للاستثمار العقاري · Staterra · شركة الشرق للتطوير العقاري ECDC · SEC · AMAK BUILD شركة أماك بيلد · SMART DIRECTIONS

01 Here's the truth

Your approvals live on scraps of paper.

Every submittal and every official letter: handwritten comments, stamps, a phone photo, then a file lost between email, WhatsApp and SharePoint. Until the day you need to prove what happened on site.

A real material submittal from a housing project, April 2023. Names and stamps hidden.

02 The real site

The numbers behind the mess.

35% of a project team's time goes on paperwork and data collection

30% of construction project delays are related to paperwork

95% of all construction data goes completely unused

03 The trap

Yes, a skilled engineer can organize the mess.

But it takes twice the effort and time, just to stay afloat. You're paying senior salaries to fight tools, not to build.

> **The problem isn't email or Excel. It's the manual, scattered process underneath them.**

WhatsApp

Critical project decisions buried in group chats

Email

Fragmented data and siloed communication

Excel

Out of sync, and needs a manual update after every approval

SharePoint

Heavy manual rework to store dead, unusable data

04 Who we are

We didn't study this problem. We lived it.

We're engineers and project managers who spent years in the field, facing the same delays, lost communications and endless paperwork you face every day.

So we decided to build the platform we always wished existed.

05 The hidden cost

What does a week's delay on one approval cost you?

What you've spent on the project only comes back to you at handover, and every week of delay pushes that back a week.

Project value	**60,000,000 SAR**
Days of delay	**7 days**
Progress to date	**50%**

Estimated cost of the delay

46,027 SAR

on **30,000,000** SAR spent so far

Assumptions: cost of money at 8% a year, whether financing or a forgone return, on what has been spent so far, if the approval delays handover by the same period. Excludes delayed revenue, supervision fees, contractor claims and penalties.

06 Our solution

Bridging the gap between the stakeholders.

Most software serves one party. Rabaed puts owner, consultant and contractor on one record, and each party keeps an internal review the others never see.

Project owner

Wants delivery on time

Engineering consultant

Wants quality assurance

Main contractor

Wants cost control

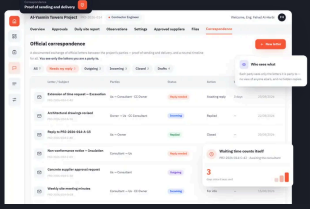

The documented Record

A win for all three parties.

07 The platform

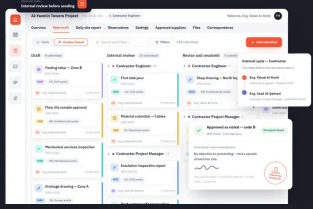

Four units. One record gathers them.

Each unit serves the owner's, the consultant's and the contractor's work where it happens, and they share one output: the documented Record.

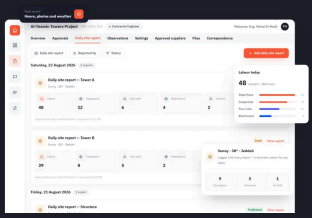

Official correspondence

Letters with reference numbers, reply status and how long each party has waited. If the project manager leaves, the letters stay with the project.

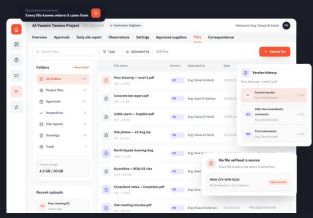

Approvals and requests

Draft, internal review, then approval. Escalations and reminders fire automatically, and every step carries a name and a time. Every approval exports to PDF with a reference number and a check code.

Daily site report

Labor, equipment, activities, materials and photos, with weekly and monthly reports generated automatically.

Documents and revisions

Always the latest revision, with every earlier one and who uploaded it, ready the moment a claim or dispute arises.

The output: the documented Record. Every request and approval dated with the name of whoever made it.

08 The documented Record

Don't ask "who approved?" Open the transaction.

The Record in Rabaed isn't a feature you switch on. It's the result of every step. Any transaction that passes through the platform carries its full record: an official letter, a material approval, a work inspection request or a schedule update. After the project ends, the record itself is still there.

LTR-088

Letter: extension of time request

Illustrative example

✓	**Sent** Eng. Fahd · Contractor	08:15
✓	**Received** Automatic receipt	08:15
✓	**Checked** Eng. Sara · Consultant	13:40
✓	**Answered** "14 days granted" · Owner	11:05

✓ **Full record · 4 steps · 3 parties**

09 Before and after

Five everyday questions. Two answers.

Each comparison is a moment from a real project: the usual way, then the same moment on Rabaed.

Approvals

What are the comments? Which revision? And who has it now?

With Rabaed

- 6 numbered items in the consultant's reply
- A reference number and a check code for every revision
- The next step is visible, and every step before it has a name and a date

Documents

How many minutes until you reach the file?

With Rabaed

- 8 clicks, and each one narrows the results
- Discipline, then document type and code, no going back
- The request with every revision, and the consultant's comments on each

Correspondence

If the project manager leaves... where does the next one find the letters?

With Rabaed

- In the project record on Rabaed
- They stay, and the successor logs in and finds them
- A "needs my reply" filter with days waiting

Dashboard

The engineer had no time to update the Excel... are the numbers right?

With Rabaed

- Every request is its own record, and the dashboard adds them up
- With every request and every approval
- Real waiting days from system time

Daily report

"What happened on site today?"

With Rabaed

- An automatic notification once the report is approved
- The same day, at 17:53
- The day's summary: 7 activities, a delivery, and 10 photos

10 Pre-made templates

Forms, ready out of the box.

Every Saudi construction form your team already uses: pre-built, routed and tracked, and exported to a clean PDF in one click. No setup, no template engineering.

SAR
Supplier Approval Request

Approve the supplier or manufacturer before delivery, with prequalification documents.

MAR
Material Approval Request

Approve materials with specifications, samples and test certificates.

DAR
Drawing Approval Request

Approve shop drawings across revisions, with the consultant's comments.

MIR
Material Inspection Request

Inspect materials on arrival at site against what was approved.

WIR
Work Inspection Request

Hand over completed work before moving to the next stage.

RFI
Request for Information

A documented technical query from contractor to consultant, with a reply deadline.

DAS
Document Approval Submittal

Approve general documents such as quality and safety plans.

NPD
Notice of Possible Delay

An early, documented notice of a possible delay that protects your rights.

NPV
Notice of Possible Variation

An early, documented notice of a possible change in scope or cost.

11 Why Rabaed wins

Three things no competitor can claim at once.

User-friendly Arabic interface

A fully Arabic interface with simple screens. Any site engineer can use it from day one, with no long training. Non-Arabic teams get an English interface.

Onsite support

Our team comes to your site in Saudi Arabia: we set it up, train your people and fix problems fast. Same language, same time zone.

Built and priced for SMEs

Made for firms running 2 to 10 projects, all from one account. One clear yearly subscription, with no big contracts and no hidden fees.

12 The impact

Proven impact, in numbers.

Against the paper cycle on the same project, once the owner, the consultant and the contractor work on the platform.

3.6×
Faster approvals and handovers

7×
Faster document retrieval

31%
Time saved on admin tasks

22%
Better document control

+1,900
Approvals documented on the platform

15 min
One introductory session per team

Fully live on site within days, with no stoppage.

13 Plans

Flexible, tailored plans, priced well below comparable global software.

Starter

Basic

- One active project
- 60-day money-back guarantee
- Standard Arabic templates

Most requested

Most chosen

Growth

- Up to 5 active projects
- Unlimited cloud storage
- Unlimited users
- Dedicated support

Fixed annual fee

Professional

- Unlimited projects and users
- Custom workflows and branding
- Data localization
- Dedicated onsite support
- Guaranteed support availability

14 How we start

Our team on your site. All three parties on the platform within days.

Set up

We set up the project and its forms, invite the owner, the consultant and the contractor, and spend 15 minutes with each team.

Go live

Within days, with no stoppage. Everyone starts from where the project has got to, and we import the schedule from Primavera P6 or MS Project.

60-day guarantee

Not seeing a difference after activation? We refund the full amount and hand you a copy of the record.
